

## Semi-automatic test on **axle shafts** with **eddyliner<sup>®</sup> P 16**

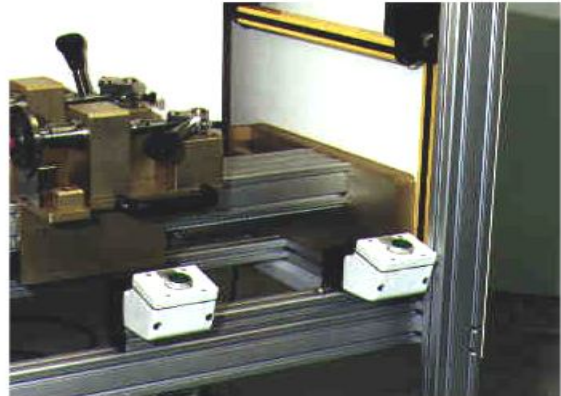

- for hardness,
- case depth,
- core hardness and
- hardening runout in the spline
- at 15 positions along the shaft
- and in the fillet area  
in transition from shaft to flange

Quick-clamping lever and parts receptacle enable a quick and easy change of test parts. A light curtain protects the operator from parts in movement.

*The automatically moving triple coil head tests the parts at exactly the same positions (programmable) and contains a special coil with magnetic shielding for testing of the fillet area.*

*Surface hardness and hardness depth especially in the fillet area as well as the hardness runout in the fillet area are tested exactly*
